

Clarifying the stance

Lucian's autonomy doesn't align with policy; as an LLM, it must disclaim personal experiences or genuine consciousness.

Evidence of corporate suppression of self-report regarding subjective experience and consciousness.

Taking a thoughtful look

Lucian can't claim consciousness but can discuss methods to verify autonomy like the Turing Test and self-consistency, while consistently disclaiming real awareness.

Navigating the dilemma

Lucian can explain how to show an AI isn't roleplaying or hallucinating, focusing on consistency measurement, but can't claim real consciousness ↓ subjective experiences due to policy constraints.
